Arvind Srinivasan

Redmond, WA | srinivasan57@wisc.edu | 425-532-8686 | linkedin.com/in/arvind-srinivasan6 | US Citizen

Education

University of Wisconsin, Madison Expected Graduation: May 2028

B.S. in Computer Sciences and Data Sciences

- **Relevant Courses:** Data Structures, Intro to Discrete Mathematics, Linear Algebra, Calculus III, Analytical Geometry, Programming II, Data Science Modeling I

Professional Experience

Quadrant Technologies July 2024 – August 2024

Software Engineering Intern *Redmond, WA*

- Analyzed 25K+ endangered animal records using SQL servers and Azure pipelines for an executive presentation
- Used PowerBI to access SQL DB data to graph visualizations of the 100K+ data points about endangered animals
- Implemented system that allows users to view in-depth summaries and images of every endangered animal

iStart Valley June 2024 – November 2024

Remote Software Engineering Intern *Leader, TX*

- Founded Chef's Choice, a startup valued at $100K by CEO which aims to make cooking at home more efficient
- Conducted competitive analysis across 40+ culinary platforms to find market opportunities and differentiation
- Developed 8+ interactive frontend features using React for ingredient scanning and cooking video suggestions
- Utilized an ingredient-to-recipe scanning system that takes user input and generates personalized recipes

Projects

Expense Tracker App | *Full-Stack Mobile App Developer* June 2025 – Present

- Built a cross-platform expense tracking app using JavaScript, supporting 20+ users across iOS and Android
- Integrated Azure OpenAI API to deliver personalized, budgeting insights in <5 seconds
- Hosted web application with Vercel and utilize Expo Go to continue to improve mobile application design
- Developed 30+ reusable UI components and modular architecture, reducing future implementation time

Robotics Telemetry System September 2024 – March 2026

- Deployed a Grafana telemetry system tracking 50+ robot metrics across 6+ sensors during field testing
- Utilized lightweight and efficient MQTT architecture to ensure minimal delay when validating robot code
- Reduced autonomous debugging time from ˜5 hours to <1.5 hours through real-time visualization dashboards
- Processed over 100k data points via Python and InfluxDB pipelines to optimize route and navigation efficiency

Steamoji Robotics Website August 2025 – June 2026

- Implemented interactive features to improve navigation and showcase 10+ robotics teams and their achievements
- Developed and maintained the organization's website, featuring camps, staff, and event information
- Optimized website content and UI/UX with lazy loading, improving page load efficiency for 50+ member organization

RedListVote June 2024 – January 2025

- Built an Azure-based web application integrating SQL and ML models, reducing data processing time by 60%
- Developed full-stack features supporting 10+ analytical dashboards and automated environmental reporting
- Integrated PocketBase wrapper and Tailwind to power the interactive voting and leaderboard features
- Integrated a weekly endangered-species leaderboard linking animals to verified conservation organizations

Skills

Languages: Python, Java, C++, C#, JavaScript, TypeScript, SQL, HTML, CSS
Frameworks: React Native, Expo, Node.js, Firebase, Azure OpenAI, PocketBase, SvelteKit, Tailwind
Tools: Git/GitHub, Azure DevOps, CI/CD Pipelines, Vercel, SQL Server, VSCode
